The End of Paper Customs

What's Changing in 2026

In 2026, the Swiss Federal Office for Customs and Border Security is fully replacing the legacy e-dec system with Passar.

■ THE RISK: ZERO PAPER TOLERANCE

If your digital data does not perfectly match your physical cargo, **your shipment stops at the border. No exceptions.**

■ Step 1: Secure Your BP-ID

The old CSP (Centralized Settlement Procedure) accounts are obsolete. To import or export in 2026, your enterprise must be registered in the ePortal with a Business Partner ID.

The BP-ID is the cornerstone of every Passar transaction — without it, no declaration can be submitted or processed.

ACTION REQUIRED:

Migrate your VAT and customs duty payment setups to the new BP-ID framework immediately. Contact the Swiss Federal Customs Administration

■ Step 2: Cleanse Your Master Data

Passar demands real-time, automated validation of every shipment declaration. Manual corrections at the border are no longer tolerated under the new system.

Errors in HS codes, origin declarations, or valuation data will trigger automatic holds — costing time and money.

ACTION REQUIRED:

Audit your ERP system today. Ensure every product's HS codes, origin data, and valuation logic are 100% accurate before transmission to avoid

■ Step 3: Adopt the Activ App

Under Passar, every Goods Declaration must be linked to a Digital Transport Declaration. Physical paper documents at border crossings are being phased out.

The Activ App enables drivers to scan the MRN (Master Reference Number) directly on their smartphones.

ACTION REQUIRED:

Ensure your drivers use the Activ App to scan the MRN on their smartphones, bypassing the physical customs counter entirely and

■ Step 4: Prepare for Passar 2.0 Imports

While Passar 1.0 digitized exports, Q2 2026 marks the aggressive rollout of Passar 2.0 for all import operations.

Enterprises that have not tested inbound supply chain compatibility will face costly holding fees at cargo terminals and significant operational disruptions.

ACTION REQUIRED:

Begin running parallel tests on your inbound supply chain now to prevent costly holding fees at cargo terminals. Build 6–8 weeks of testing into

YOUR SOLUTION

Seamless Compliance with Agence Fret Cargo

Don't let a software update disrupt your global supply chain.
We provide comprehensive Passar 2.0 compliance support:

Direct Passar API Integration

Real-time data validation
before cargo moves

Live Problem Solving at the Border

Human experts available
when issues arise

38 Years of Swiss Customs Expertise

Deep regulatory knowledge
built over decades

Trusted by Enterprises Worldwide Since 1988

Secure Your Supply Chain for 2026

When giant logistics corporations say "wait a week" **our experts find a way in a few hours.**
